LINKEDIN

linkedin.com/in/aditya-bayu-pratama-00561314a

CORE COMPETENCIES

SOFTWARE

C# (.NET), SQL / MySQL, Python, React.js, JavaScript, C++, LabVIEW, Dart / Flutter, REST APIs

SMART MANUFACTURING

MES architecture, Industrial IoT, traceability, Pokayoke, AOI machine vision, SMT process, Node-RED

HARDWARE

PLC (BNSP certified), SCADA, Raspberry Pi, Arduino, Lidar, data acquisition, PID control

AI & TOOLING

AI-assisted development, prompt engineering, LLM integration, LM Studio, Claude Code, Cursor, Codex, OpenCV

EDUCATION

State Polytechnic of Batam

JUL 2017 – JUL 2021

Bachelor of Applied Science (S.Tr.T.)
Mechatronics, Robotics & Automation
Engineering

Graduated Cum Laude · GPA 3.81 / 4.00

PROFILE

MES & IT Engineering Supervisor with more than seven years designing and running Manufacturing Execution Systems, Industrial IoT and machine vision for high-precision electronics and oil & gas. Grew the software and IT function from a solo role into a five-engineer department, architected a custom C#/.NET MES governing 500+ product models, and turned manual factory workflows into digital ones — one of them from 5–7 hours with 4–6 people to a 30-minute automated flow.

EXPERIENCE

GIKEN PRECISION INDONESIA

Batam · Apr 2019 – Present

MES & IT Engineering Supervisor

Jul 2026 – Present

- Lead the MES and IT engineering function: system roadmap, architecture standards, project prioritisation, department budget and the engineering team.

Lead Software & IT Engineer

Apr 2019 – Jun 2026

- Designed and deployed a custom Windows-based MES (C#/.NET, MySQL) governing 500+ product models across automotive, medical and consumer electronics lines, enforcing Pokayoke defect prevention and CTQ compliance.
- Built Giken One, an enterprise web platform (React.js, MySQL) digitising employee records, org charts, overtime approvals, IT ticketing and project scheduling.
- Engineered an automated ESD wristband gate (Arduino, C#, MySQL) enforcing 100% compliance before line entry, automated QR-code thermal label printing and centralised file storage across all departments.
- Contained a worm malware outbreak across 20 laptops in 3 hours with no downtime; sustained 99.9% uptime on core MySQL servers; resolved network outages inside 15-minute SLAs.

Software Test Engineer · New Product Introduction Engineer

Apr 2019 – Apr 2024

- Built machine testing software and ran production trials for new products; produced FMEA, 5M change management, BOM and QCPC documentation for NPI.

CLADTEK BI-METAL MANUFACTURING

Batam · Apr 2018 – Jan 2019

Junior Programmer — R&D Department

Apr 2018 – Jan 2019

- Built an autonomous pipe-inspection robot (C#, Raspberry Pi, Lidar, light sensors) navigating inside industrial pipes, streaming live video and calculating weld defect location and severity, with low-latency links to central servers.

SELECTED PROJECTS

Manufacturing Traceability System — Giken One MES

2019 – Present

Plant-wide MES with per-line production dashboards, full unit traceback and SMT refill control across 500+ product models. 1st place globally, Giken Value Engineering Award 2023.

Intelligent Machine Data

2025

Real-time machine data acquisition and analytics replacing manual reporting with live line-efficiency and downtime visibility. 1st place globally, Giken VE Award 2025.

Auto Feeder Machine Data Generator

2026

Digitalised the SMT feeder data flow across four roles: 5–7 hours with 4–6 people became a 30-minute automated flow, cutting cycle time by roughly 93%.

PCBA Management Apps

2026

React.js and MySQL platform running the PCBA IT department: tickets, tasks, schedules, projects, attendance, assets and knowledge base on one live dashboard.
